Product Overview

The Micsig SigOFIT™ optical isolated probe, MOIP Series, offers a bandwidth range from 200 MHz to 1GHz, enabling differential measurements from ±0.01 V up to ±20 kV. Built on Micsig’s exclusive SigOFIT™ leading technology, MOIP Series delivers an exceptionally high CMRR, reaching up to 128 dB at 100 MHz, with an isolation voltage of up to 85 kV and an ultra-low noise floor of less than 0.3 mVrms. It reveals the complete truth of signals across its bandwidth range, serving as the ultimate referee for verifying the fidelity of signals measured by other voltage probes.

Product Features

- Automatic calibration: Ready for measurement upon power-on, no manual calibration required.
- Complete electrical isolation with isolation voltage up to 85 kV.
- Ultra-high common-mode rejection ratio (up to 180 dB).
- High-speed response for accurate and reliable high-frequency signal measurement.
- Low noise and strong immunity to electromagnetic interference.
- DC gain accuracy better than 1%.
- Fiber length: 2 m (customizable fiber length available).
- Compatible with various attenuators, supporting measurement from ±0.01 V to ±20 kV (differential-mode signals; measurement voltage range is customizable).

■ High Voltage Differential Probe ■ SigOFIT Optical-fiber Isolated Probe

Present True Signal

SigOFIT probe delivers highest CMRR: over 128dB at 100MHz. It's the ultimate referee of signal fidelity measured by other voltage probes.

Best Probe for Third-Gen Semiconductor

Devices like SiC and GaN can switch high voltages in a few nanoseconds and generate very high-energy, high-frequency harmonics. Even at its highest bandwidth, the SigOFIT probe still maintains over 100dB CMRR and perfectly suppresses oscillations caused by high-frequency common-mode noise, making it the best choice for third-generation semiconductor test and measurement.

Key Solution for Wide Semiconductor Testing

The test leads of SigOFIT probe are short and with coaxial cable transmission, the input capacitance is as low as 1pF minimum, making it very safe for testing GaN devices.

Wide Measurement Range

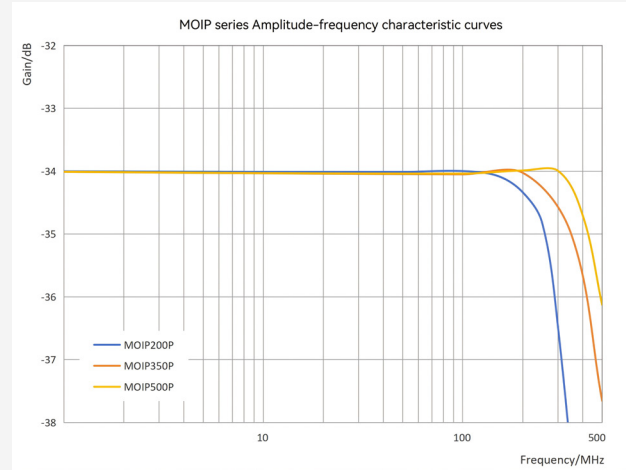

Unlike traditional differential probes can only test high-voltage signals, the SigOFIT probe can be used with different attenuator tips to test differential mode signals from ±0.01V to ±20kV, achieving full-range output and very high signal-to-noise ratio.

Highest Accuracy

SigOFIT probe has excellent amplitude-frequency characteristics. DC gain accuracy $\leq 1\%$ within $\frac{1}{2}$ bandwidth, while noise $\leq 0.3\text{mVrms}$. Zero drift $<0.1\%$ (works 5 mins later), gain drift also $<1\%$.

Calibration-Free

Real-time optical power compensation ensures continuous high-fidelity waveform output in complex 24/7 measurement environments, with no manual calibration required.

Switching between 0dB and 20dB

SigOFIT optical isolation probe can be switched between 0dB and 20dB. Besides, different attenuators can be replaced to improve the signal-to-noise ratio, so that a single attenuator also has two range gears to improve the signal-to-noise ratio.

Applications

SigOFIT™ optical isolated probe reveals the complete truth of signals across its bandwidth range, serving as the ultimate referee for verifying the fidelity of signals measured by other voltage probes.

- * Design of motor drive, power converter, electronic ballast
- * Design of GaN, SiC, IGBT Half/Full bridge devices
- * Design of inverter, UPS and switching power supply
- * Safety test for high voltage, high bandwidth applications
- * Power device evaluation
- * Current shunt measurements
- * EMI & ESD troubleshooting
- * Floating measurements

No.	Attenuator	Characteristics
1	Standard Model Attenuator	SigOFIT probe can be used with different attenuator tips to test differential mode signals from $\pm 0.01V$ to $\pm 20kV$. test voltage range are customizable.
2	Ultra-High Voltage Attenuator	Supports up to 20 kVpk high-voltage input and a 200 MHz bandwidth limit, enabling high-voltage signal measurement, equipment protection, and high-energy testing.
3	Continuous RF ultra-high-voltage attenuator	Maximum supported voltage: 5 kV, frequency range: 300 kHz – 50 MHz, accuracy: 1%, no heating or breakdown.
4	Long Type Attenuator (typical 1M)	1 m extended attenuator, suitable for applications with limited internal equipment space or longer signal transmission distances.
5	SMA Adapter	SMA direct connection to the optical isolation probe, with 2× attenuation, for low-level signal measurement.

1. Standard Model Attenuator

SigOFIT optical isolated probe, when paired with different attenuators, supports differential signal measurements from $\pm 0.01\text{ V}$ to $\pm 5000\text{V}$.

- * Attenuators for different measurement ranges can be customized.

2. Ultra-High Voltage Attenuator

Supports up to 20 kVpk high-voltage input and a 200 MHz bandwidth limit, enabling stable testing from low to ultra-high voltage ranges and significantly expanding measurement coverage.

Attenuator Model	Attenuation ratio	Voltage range	Non-destructive voltage (Max.)	Input impedance

3. Continuous RF ultra-high-voltage attenuator

Supports continuous AC high-voltage measurement up to 5 kV over a 300 kHz–50 MHz range, with low loss, no self-heating, and anti-breakdown design. It can be customized for RF high-voltage applications above 5 kV, suitable for R&D and testing environments requiring stable long-term operation and high signal fidelity.

Bandwidth: 300 kHz–50 MHz

Peak voltage: 5000Vpk

Accuracy: 1%

No heating

4. Long Type Attenuator (typical 1M)

Designed for rack-mounted testing and system integration environments, suitable for space-constrained installations, long signal routing distances, and thermal shock testing applications.

- Attenuators of multiple models are available in a 1m length.
- Customization of different lengths is also supported.
- Operating temperature: -40°C to 85°C; customizable up to -50°C to 150°C

5. SMA Adapter

SMA adapter enabling direct SMA connection to the optical isolation probe for small-signal measurement. 2× attenuation, supports up to 1 V input, and includes an SMA cable for direct connection to the signal source.

Attenuator Accessories

Attenuator Connector

The MOIP Series supports multiple connector types for DUT connection. Different connector choices may influence measurement accuracy, so the standard connector is recommended whenever possible. Optional connector accessories are available upon request through customer service.

Accessory Type	Voltage range	Non-destructive voltage (Max.)
MCX jack	±2500V	≤ 2500Vpk
